

Sprint 3 Report - CMPS 115

What things should we stop doing?

- Getting distracted very easily.
- Rehashing the same ideas without new thoughts coming from them

What should we start doing?

- DEPLOYING THE SITE
- Checking with Ali to ensure it's exactly as he wants it.
- Figuring out how to make the of these depths

What is working well that we should continue to do?

- Helping each other out with issues
- Discovering new and fun ways to get things done
- Keeping each other on track
- Challenging each other
- Finding the reputable way to fix things instead of hacking something together.

What work was completed, and not completed?

- Most of our tasks and other added tasks were completed
- The App and Weekly Blog were back burnered.
- We enhanced visualization and made an algorithm that ensure all relevant data was being present without the noise of the plug
- We can show real time data coming from the plug
- Devices are presented in a nice way with relevant information alongside the device box.
- User can now reset their password and there is a nicely formatted Welcome Email for newly registered users.
- Had to push the classification icons -- but a user can manually input type of appliance (a limited amount now).
- Commented/refactored most of the code
- The site is essentially fully functional.

The original Scrum Board.

Sprint 3 Status

[GitHub](#) 

Task	Assigned To	Story Points	Status
Learn Swift/iOS conventions	Team	4	In progress
Determine who will work on which aspect of the app	Britt/Cass/Kevin (could also be other people)	2	In Progress
Actively build/make the app	Britt/Cass (potentially others)	6	In Progress
Add weekly news blog to the site	Rita/Cass	3	In Progress
Fix the About section of the app	Team	1	In Progress
Add status bar that will indicate whether it is known which appliance is plugged in	Team	2	Paused until Info from classification team
If no appliance detected/classified, have user manually input the appliance that's connected	Team	2	Paused until info from classification team
